1. Remove the small screw from the plug side of the connector and remove the plug.
2. Pass the trailer wires through the smaller opening at the back of the connector and out through the plug end. It may be necessary to loosen the large set screw at the back of the connector which will allow the wire clamp to move freely.
3. Connect the wire leads to the proper plug terminals (see diagram).
4. Insert the plug back into the front of the connector and reinstall the small screw.
5. Tighten the large set screw at the back of the connector so that the wire clamp holds the wires securely.
6. Attach the connector to the tow vehicle and test trailer functions.
7. Plug the completed trailer connector into the tow vehicle connector and test all functions.

NOTE:

Locate wires and pin location by function on tow vehicle or trailer. Color coding is not standard among manufacturers. Housing body will illuminate upon taillight activation when inserted properly within tow vehicle socket.
